Introduction to Alpha Release

Aurum is a mobile app designed for everyday consumers and business owners alike, who aim to identify, understand, and keep track of their coins. This is the Alpha release of Aurum, meaning that while features are functional, full performance of each feature is not currently supported. Specifically, multi-platform support, although technically currently possible, is not feasible for everyday access. Because of this, the Alpha release for Aurum will be on *Android devices only*.

Features currently available (with their constraints)

- Coins List

Includes 108 U.S.A Coins with their respective data

- Portfolio Tracking

Accounts are fully supported; portfolios are backed up

Local and Account Portfolios are supported

- Coin Scanner

Supports 5 Coins (Nickel, Dime, Penny, Quarter)

Confirmation and direct addition to portfolio are supported

Instillation Guide

This is where you will learn how to install the Alpha release of Aurum on your Android device!

Step 1: Authorize Apps from Unknown Sources

This step will look a little different depending on what type of device you have and what version of Android you are running. For Android 15, the steps are as follows:

1. Navigate to the settings app
2. Navigate to the “Apps” tab in settings
3. Scroll down to the “Special app access” tab and open the menu
4. Tap on “Install unknown apps”
5. Tap on the web browser you will be using to download the app
6. Finally, tap on the “Allow from this source” switch to enable apps from unknown sources!

NOTE: Having this setting on can dramatically reduce device security. Once you are finished installing Aurum’s alpha stage, consider switching this setting off.

Step 2: Download and Install the APK

1. Now that you have authorized your browser to install apps, navigate to the following webpage to download the APK: aurumcomex.com
2. When the APK starts or finishes downloading, you may get messages warning you about the danger of downloading “dangerous files." Navigate through these popups by pressing “allow” or "okay.” (The pop-ups will vary depending on your device.)
3. After downloading the APK, tap on the file and press “install” in the pop-up that appears. The APK will then proceed to install the Aurum beta onto your device!

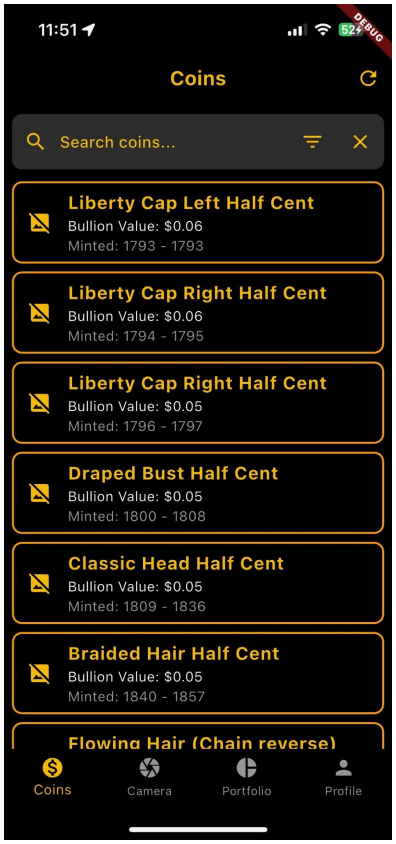

Aurum has been successfully installed on your device. The next couple of pages will take you through the features available currently and how to use them.

Usage Guide

This is where you will learn how to use the various features of Aurum's alpha release!

- Coin Tab

The first tab you will see when the app opens is the coins tab. This is a collection of every coin currently tracked by Aurum.

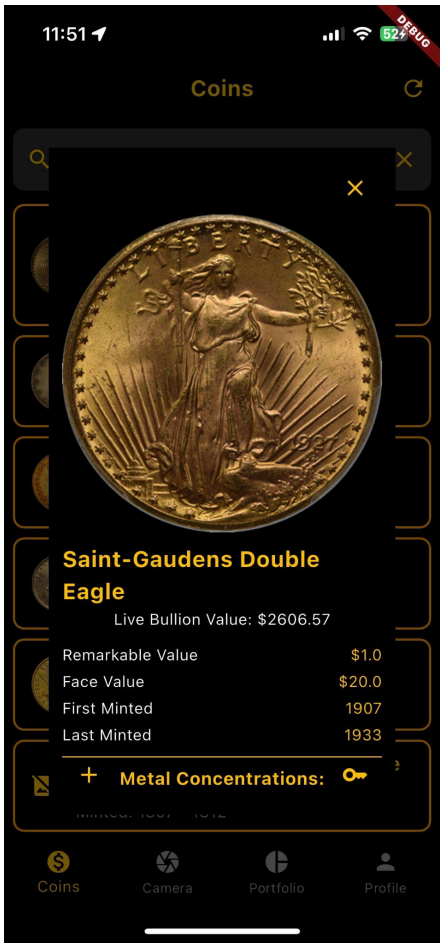

You can use the Search Bar (top of the screen) to search for any specific coins.

The refresh button (top right) can be used to refresh the live bullion value of each of the coins.

The filter icon (right side of the search bar) can be used to sort the coins by any of the following options:

None	
Bullion Value	By metal value (descending)
Face Value	By face value (value during circulation)
First Minted	By first minted (first created)

Tap on any of the coins to get more detailed information about the coins and/or to add the coin to your portfolio.

Detailed information about the coin:

Image of coin (if currently available)

Name of coin

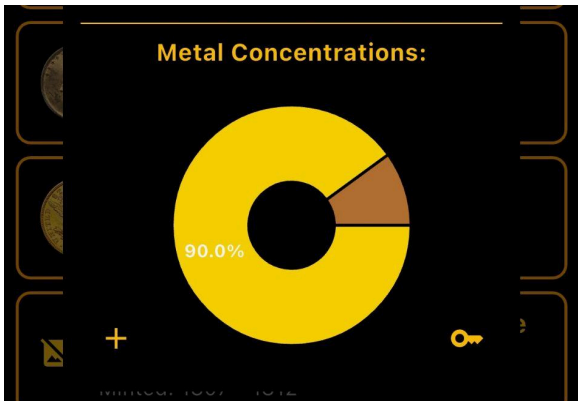

Live Bullion (metal) price

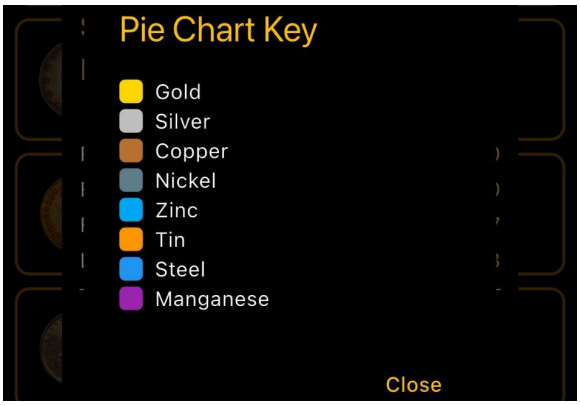

Remarkable value: how valuable over bullion price the coin is

Face Value: What the coin was worth when circulated

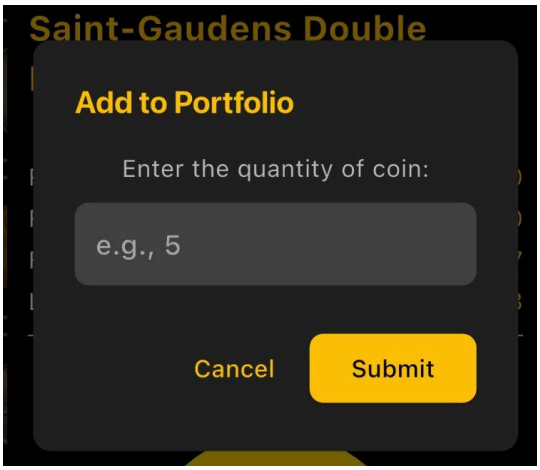

First/last minted: when the coin was made

Scrolling down past this reveals a pie chart, where the different colors represent different metals that make up each coin. A key for the pie chart can be viewed by pressing the key icon in the bottom right-hand corner of the popup, as is seen below:

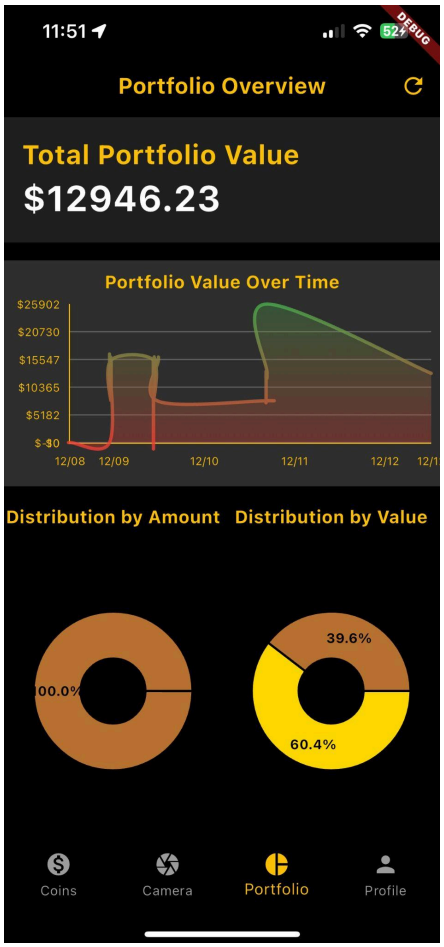

Additionally, you have the ability to add coins to your portfolio directly from this pop-up screen. Just press on the “+” icon in the bottom left of the icon to make the following popup appear:

After entering the quantity, pressing submit adds that amount of the coin to your portfolio.

- Portfolio Page

Whenever you add a coin to your portfolio, this is where it goes! All relevant information about the coins you've added is displayed here. In order to navigate here, press on the "Portfolio" tab on the bottom navigation bar of your screen.

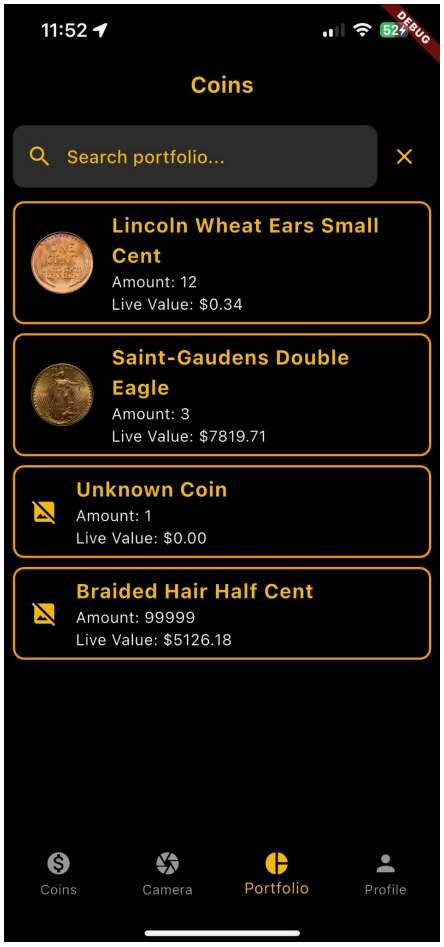

Total Portfolio Value: the current live Bullion (metal) value of all the coins you've added to your portfolio.

Graph of your portfolio values over time. Refreshes each time the portfolio is updated.

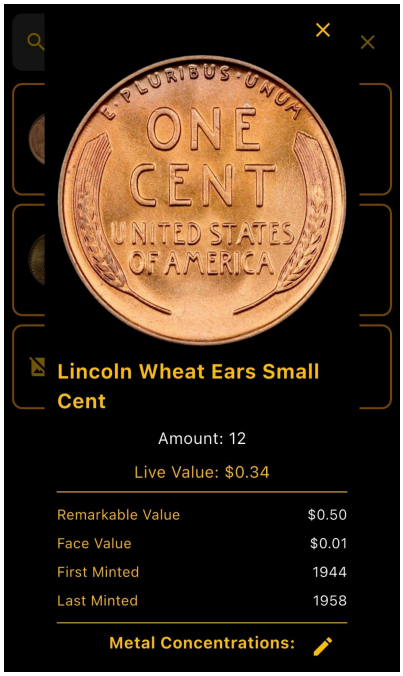

Pie charts, representing which metals make up your portfolio, by amount (# of coins) vs value (Bullion value)

Swiping down from anywhere on this screen brings you to a detailed look at each coin in your portfolio. This is where you can edit coins already in your portfolio. Swipe up to return to this page.

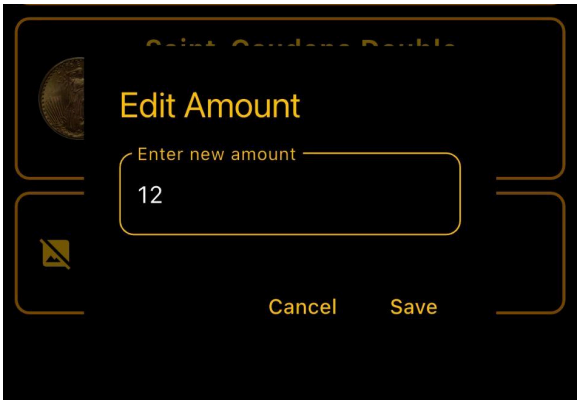

The search bar allows you to search for specific coins in your portfolio

Each coin in your portfolio has a dedicated card, where you can see information about each coin and edit the quantities of each coin in your portfolio.

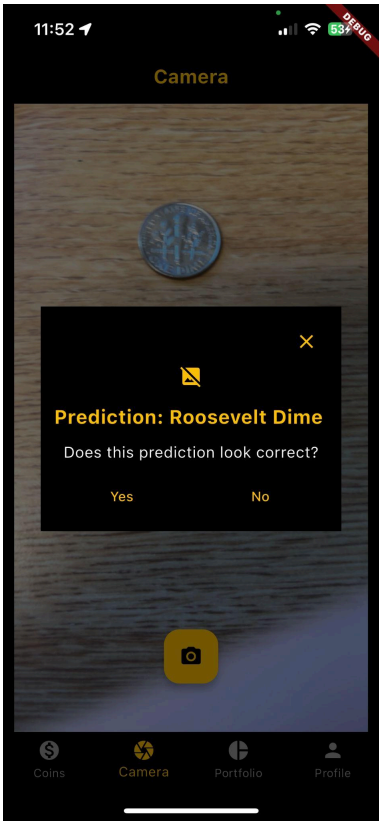

Pressing on the pencil icon in the bottom left corner of the popup brings up the following screen:

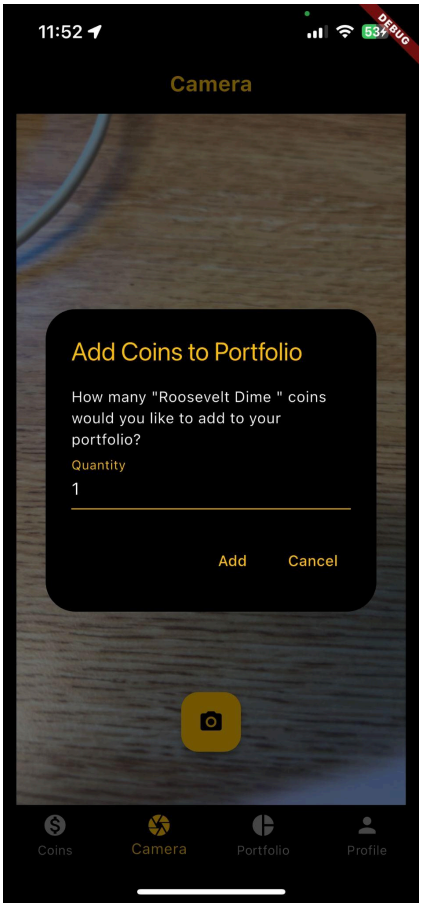

- Camera Page

If you don’t know what a coin is and want to identify it, this is the place to do it! To navigate to the camera page, press on the “Camera” tab on the bottom navigation bar.

Once you are at this page, take a picture of the coin you are trying to identify. The image recognition software will show a pop-up, asking you to confirm the coin it identifies. If there is a picture, it will be shown for easy verification.

If you confirm that the predicted coin is accurate, the software will then prompt you to add it to your portfolio. Just enter the amount of coins you'd like to add, and then the app does the rest!

Please note that this feature is currently extremely unstable, and more training needs to be done for the model to be accurate. Currently, the model can only identify pennies, dimes, nickels, and quarters by their face side, but expansion will be quick once pictures are obtained.

Thank you for reading the Aurum User Guide! If you have any additional questions, feel free to reach out to me, and I'll get back to you as soon as possible.
